**army ground guide hand signals: An Army of Stories** Roger Mason, 2015-06-23 Private First Class R was an excellent soldier so it was unlike him to be late. When he came in a few minutes later I could see by the grim look on his face that something was terribly wrong. He immediately began to cry and tell me that his wife had miscarried the child they had so badly wanted. I had never seen anyone cry as much as he did that morning and one box of tissues simply was not enough. After a while, the front of his uniform was soaked from his many tears, and I felt horrible seeing him suffer. It was one of those times when I would have moved Heaven and Earth if I could have but I could not. It humbled me because I wanted to order someone to do something to fix the problem, but this time it would not be that simple. I had always taken pride in looking out for the welfare of the soldiers in my charge but this time was different; I knew I was not a miracle worker but I felt I had let him down because as much as I wanted to, I did not have the power to bring back his baby. It was the worst day of my Army career because a good soldier who looked up to me for wisdom and guidance was in peril, and there was nothing I could do. I felt like a weakened Superman hopelessly dragging his feet through a field of Kryptonite, because there I was with all my rank and power that the Army had entrusted in me, but I was useless to him.

CONTENTS: Army Combat Fitness Test Training Guide Version 1.2 FIELD TESTING MANUAL Army Combat Fitness Test Version 1.4 Army Combat Fitness Test CALL NO. 18-37, September 2018 FM 7-22 ARMY PHYSICAL READINESS TRAINING, October 2012 IOC TESTING - ACFT EQUIPMENT LIST (1 X LANE REQUIREMENT) Version 1.1, 4 September 2018 ACFT Field Test Highlight Poster (Final) OVERVIEW: The Army will replace the Army Physical Fitness Test (APFT) with the Army Combat Fitness Test (ACFT) as the physical fitness test of record beginning in FY21. To accomplish this, the ACFT will be implemented in three phases. Phase 1 (Initial Operating Capability - IOC) includes a limited user Field Test with approximately 60 battalion-sized units from

across all components of the Army. While the ACFT is backed by thorough scientific research and has undergone several revisions, there are still details that have not been finalized. The ACFT requires a testing site with a two-mile run course and a flat field space approximately 40 x 40 meters. The field space should be grass (well maintained and cut) or artificial turf that is generally flat and free of debris. While maintaining testing standards and requirements, commanders will make adjustments for local conditions when necessary. The start and finish point for the two-mile run course must be in close proximity to the Leg Tuck station. When test events are conducted indoors, the surface must be artificial turf only. Wood and rubberized surfaces are not authorized as they impact the speed of the Sprint-Drag-Carry. When environmental conditions prohibit outdoor testing, an indoor track may be used for the 2 Mile Run. The Test OIC or NCOIC are responsible to inspect and certify the site and determine the number of testing lanes. There should not be more than 4 Soldiers per testing group for the SPT, HRP, and SDC. The OIC or NCOIC must add additional lanes or move Soldiers to a later testing session to ensure no more than 4 Soldiers per testing group. Concerns related to Soldiers, graders, or commanders will be addressed prior to test day. The number of lanes varies by number of Soldiers testing. A 16-lane ACFT site will have the following: ACFT specific test equipment requirements: 16 hexagon/trap bars (60 pounds), each with a set of locking collars. While all NSN approved hexagon bars must weigh 60 pounds, there is always a small manufacturer's production tolerance. The approved weight tolerance for the hexagon bar is + 2 pounds (58-62 pounds). Weight tolerance for the hexagon bar and therefore the 3 Repetition Maximum Deadlift does not include the collars. On average hexagon bar collars weigh < 2.0 pounds per pair and are considered incidental to the total weight of the MDL weight. Approximately 3,000 lbs. of bumper plates. 16 x 10 lb. medicine ball 16 x nylon sled with pull straps. 32 x 40 lb. kettle bells. Permanent or mobile pull up bars (16 x pull-up bars at approximately 7.5 feet off the ground with step-ups for shorter Soldiers). Common unit equipment for set-up and grading: 16 stop watches. 8 x 25m tape measures. 8 x wooden or PVC marking sticks for the SPT. One stick for every two lanes. 70 x 18" traffic cones. 50 field / dome cones. A soft, flat, dry test area approximately 40m x 40m on grass or artificial turf (half of a soccer or football field). A site that is free of any significant hazards. A preparation area (can be same as briefing area) to conduct Preparation Drill. A generally flat, measured running course with a solid, improved surface that is not more than 3 percent uphill grade and has no overall decline (start and finish must be at the same altitude).

**army ground guide hand signals:** *Tc 3-21.60 Visual Signals* Headquarters Department of the Army, 2017-09-07 The purpose of Training Circular (TC) 3-21.60 is to standardize visual signals and to serve as a training reference. It is a guide. It does not cover all visual signals used in the

Army, only those that are commonly used. Signals used with equipment or during operations are in manuals that relate to such operations. Efficient combat operations depend on clear, accurate, and secure communication among ground units, Army aviation, and supporting Air Force elements. Control and coordination are achieved by the most rapid means of communication available between Soldiers and units. When electrical and/or digital means of communication are inadequate, or not available, a station-to-station system of visual communication is an alternate means for transmitting orders, information, or requests for aid or support. Through the use of hand-and-arm signals, flags, pyrotechnics, and other visual aids, messages may be transmitted. Although many of these signals are widely used, incorporated into unit communications-electronics operating instructions and standing operating procedures, Army-wide standardization will increase their effectiveness.

**army ground guide hand signals: Grogan's Story** CW03 MICHAEL GROGAN (RET.) UNITED STATES ARMY, 2022-03-22 Shortly after the September 11, 2001, terrorist attacks on our country, Reserve Coast Guard Investigative Service Special Agent Michael Grogan received active duty orders and became one of the Coast Guard's first ever sea marshals. Sea marshals were tasked with preventing terrorists from taking positive control of ships and running them into the Golden Gate Bridge, other vessels, a pier, or other target of opportunity. Grogan and his fellow sea marshals realized even crew members could be members of Al Qaeda or Al Qaeda supporters. The ships sea marshals protected consisted of oil tankers; container ships, cruise ships, and bulk carriers. These ships came from all around the world. Grogan transferred military branches and became an Army Criminal Investigation Division (CID) special agent serving in several active duty assignments to include Iraq; Afghanistan, and the Pentagon. After twenty-two years of military service, Grogan retired at the rank of Chief Warrant Officer 3. In his civilian life, at the age of nineteen, Grogan worked as a reserve police officer for the Los Gatos, California, Police Department. At the age of twenty, Grogan spent a thirty-year career with the Millbrae, California, Police Department and retired at the rank of Captain. While at the Millbrae Police Department, Grogan faced two of the greatest tragedies of his life; the murder of a close friend and fellow police officer and the drowning of an infant whom he drove to the hospital, but could not save.

**army ground guide hand signals: FM 21-76 Survival Manual** US Army, 2018-09-14 Foremost among the many problems that can compromise a survivor's ability to return to safety are medical problems resulting from parachute descent and landing, extreme climates, ground combat,

evasion, and illnesses contracted in captivity. Many evaders and survivors have reported difficulty in treating injuries and illness due to the lack of training and medical supplies. For some, this led to capture or surrender. Survivors have related feeling of apathy and helplessness because they could not treat themselves in this environment. The ability to treat themselves increased their morale and cohesion and aided in their survival and eventual return to friendly forces. One man with a fair amount of basic medical knowledge can make a difference in the lives of many. Without qualified medical personnel available, it is you who must know what to do to stay alive.
